

The MadeWell® product line represents simple solutions for complex problems. MadeWell® takes us back to our roots of solving everyday challenges for industries such as architecture, transportation, semiconductor, electronics, engineering services, and many others. This collection leverages our patented technologies, helping us better develop engineering breakthroughs. MadeWell® products use the latest engineering technology to deliver simple yet reliable answers to specific applications.

Located in the historic California steel town of Pittsburg, today's bustling 85,000 square-foot facility is a far cry from the humble Oakland machine shop where the company's founder got his start in the 1950s.

The **Bishop-Wisecarver Group** (BWG) is a WBENC certified woman-owned family of companies who operate within AS9100C and ISO 9001:2008 certifications to work with manufacturers to engineer, manufacture, and build linear and rotary motion solutions, custom complex assemblies, and optimal embedded intelligence systems. Through the integration of our mechanical, electrical, software, control and systems design engineering expertise, 62+ years of experience, and 20,000+ unique clients, we continue to provide a single point of service that results in custom designs, increased efficiencies, and accelerated time to market.

BWC

Bishop-Wisecarver Corporation helps

manufacturers and automation solution providers engineer linear and rotary motion solutions. With 60+ years of engineering expertise and manufacturing best practices working with over 20.000 customers, we understand our customers' design and application requirements which enables us to develop unique solutions that typically ship within 2 to 3 weeks. Customers achieve 50% faster time to market, up to 50-75% lower maintenance and installed costs, product differentiation, and longer product life.

WRW

WRW Engineering helps companies integrate

companies integrate mechanical, electrical and software engineering to deliver custom mechatronic solutions. By understanding the interplay between these three disciplines, we design and develop optimal embedded intelligence systems such as automated flexible testing stations, smart products, and autonomous machines. Through this holistic approach, our customers realize higher production efficiencies, faster time to market, and increased revenues.

www.wrweng.com info@wrweng.com 888.580.8272

BDM

Black Diamond Manufacturing

is a specialty contract manufacturer of complex electro-mechanical sub-assemblies providing a single source solution from prototype to full production resulting in lower overall cost. BDM is different from other manufacturers because we have the ability to scale from prototype work to full production, and the ability to manage the customer's supply chain and hold consignment inventory. With 60+ years of in-house manufacturing experiences and capabilities BDM provides solutions for custom sub-assemblies.

Product Overview	
Radial Wheels	3-4
Crown Rollers	5-6
Product Summary	7
Load/Life Relationship	8

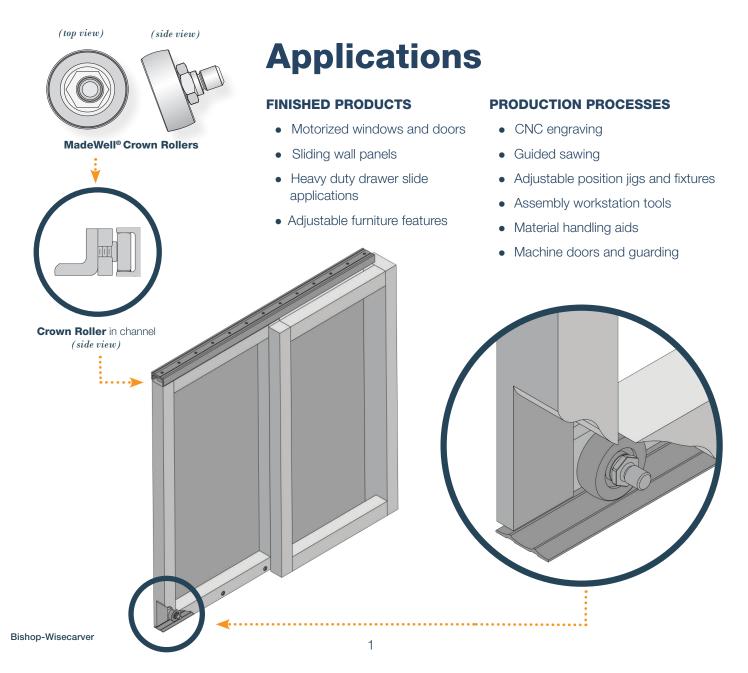

Introduction

MadeWell® Radial Wheels with precision ground 90° vee running surfaces are designed for linear guide wheel applications where simplified loading conditions exist and where an economical solution is a primary concern. They are suitable for use in factory production processes and on finished products for your customer.

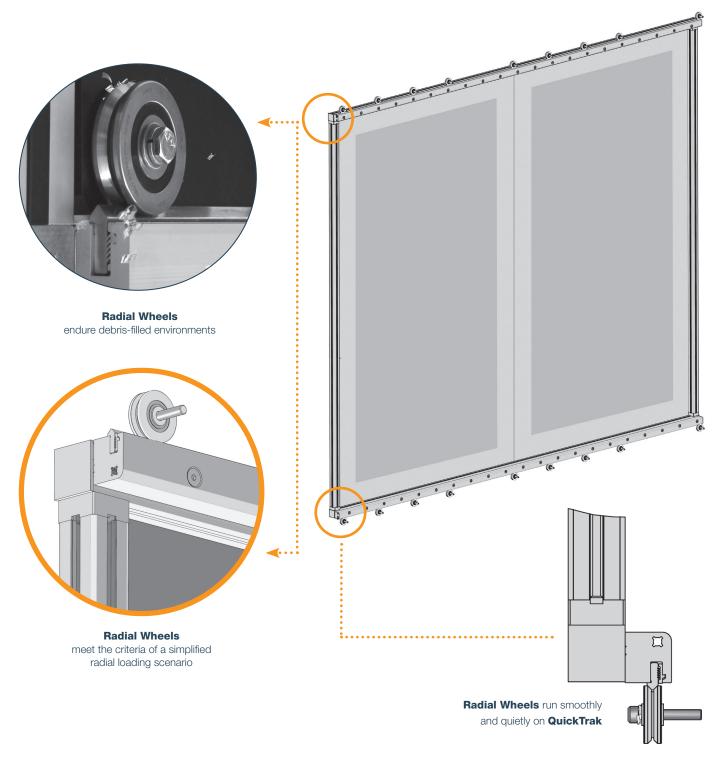

MadeWell® Radial Wheel (cross-section)

MadeWell® Crown Rollers with precision ground curved running surfaces ensure smooth linear guidance and are designed to eliminate problems with misalignment and binding which can occur when guide tracks are mounted in parallel.

Application Example

This assembly depicts how **MadeWell® Radial Wheels** and a **QuickTrak®** single-edge guide provide a cost-effective solution for an industrial machine tool manufacturer where metal debris and cutting fluids are present.

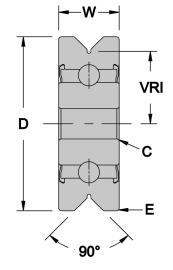

MadeWell® Radial Wheels

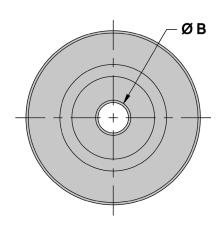

- Carbon steel and stainless steel versions are available in three sizes: 1, 2, 3
- Materials used include high carbon tool steel (AISI 52100), high carbon martensitic stainless steel steel (AISI 440C), Nylon with fiberglass fill 25% (PA66 GF25) and nitrile butadiene rubber (NBR)
- Designed to run on matching 90° vee edge track
- Three standard sizes to accommodate design envelope and load carrying requirements
- Recommended maximum operating speed is 5.5 m/s
- Recommended operating temperature range: -20°C to +100°C

Working Load Capacities

Working load capacities are based on empirical data on guide wheels used in general applications with static and dynamic load conditions. Guide wheels can routinely achieve travel life of one million cycles or higher when these specified load capacities are observed.

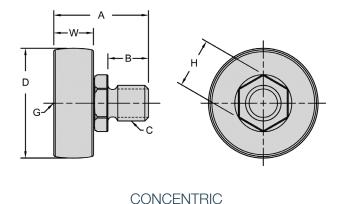

MadeWell® Crown Rollers Polymer Series

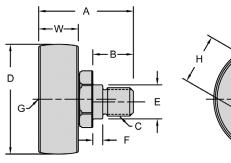

- Designed for light duty and light loading applications
- Materials are polyacetal overmolded on an AISI 440C martensitic stainless steel bearing, single row ball bearing
- Threaded mounting stud with hex features are permanently attached
- Designed to run on flat surfaces and ideal for use with aluminum open channel UtiliTrak extrusion
- Concentric and eccentric versions available enable fit and preload adjustment

Product Summary

MadeWell® Crown Rollers

This product line can be used in conjunction with **DualVee®** guide wheels for applications requiring pairs of linear guide systems operating in parallel. Such arrangements are used when wide spans or high moment loads need to be supported.

One slide uses **DualVee®** guide wheels with vee channel track and the other uses **MadeWell®** Crown Rollers with **UtiliTrak®** open channel track. Working in unison, the vee side serves as the primary guide while the roller side provides radial support to compensate for parallel misalignment.

Because precise parallelism between paired guides is difficult to achieve, the usage of **MadeWell® Crown Rollers** on one side instead of both sides using **DualVee®** guide wheels compensates for mounting errors.

Load/Life Relationship Equation and Sizing/Selection

Several factors influence the service life of a linear guide wheel. Through research and development, Bishop-Wisecarver has devised a simple method to estimate the load/life relationship for a specific MadeWell® guide mechanism under defined loading conditions. The methodology accounts for the size of the bearing elements and the load orientation and magnitude. The equation is based upon clean and well lubricated track conditions; so for applications where lubrication is prohibitive, a derating factor must be applied. It is important to note that secondary considerations such as maximum velocity, acceleration rates, duty cycle, stroke length, environmental conditions, the presence of shock and vibration, and extreme temperature ranges can all impact service life to varying degrees. As such, the sizing method is considered only as a guideline for the sizing of MadeWell® components.

The load/life estimation requires a basic understanding of the principles of statics, the ability to work with free body diagrams, and the capacity to resolve externally applied forces on a MadeWell® based carriage assembly into the radial and axial reaction forces at each guide wheel in the design. The life of a MadeWell® based carriage assembly will be limited to the life of the most heavily loaded wheel in the design.

The life of a MadeWell® based carriage assembly will be limited to the life of the most heavily loaded wheel in the design.

Step 1: Calculate the resultant radial and axial loads reflected to each bearing element in the linear guide design

All standard considerations involved in statics calculations must be accounted for, including inertial forces, gravitational forces, external forces such as tool pressure, bearing element spacing, and magnitude and direction of the payload. Any external forces that generate a reaction through the wheel/ track interface need to be considered. If assistance is required in resolving specific loads into the resultant reaction forces at the guide wheel interface, contact our Applications Engineering staff for support. It is recommended that an application data sheet, which can be found in the DualVee catalog or on the Bishop-Wisecarver website, be submitted beforehand with as much application information detailed as possible.

Step 2: Calculate the load factor for the most heavily loaded bearings

$$\mathbf{L}_{\mathbf{F}} = \frac{F}{F_{\text{A(max)}}} + \frac{F}{F_{\text{R(max)}}}$$

Bearings should be sized such that $L_F \le 1$

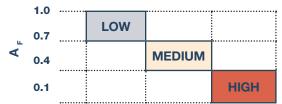

The most heavily loaded bearing will have the highest load factor

Step 3: Calculate life by applying the load factor to the load/life equation below

Due to varying application load and speed parameters and environmental conditions, the appropriate adjustment factor (A_F) must be applied to the life equation.

Adjustment Factor (A_r)

Application conditions include: contamination, duty, speed, cycle, acceleration, shock, presence of lubrication

WHERE L_{\perp} = Load factor

F = Resultant axial load on the guide wheel

 $\mathbf{F}_{A \text{ (max)}} = \text{Maximum axial working load capacity of guide wheel}$

F_R = Resultant radial load on the guide wheel

 $\mathbf{F}_{\mathbf{R}_{(max)}}$ = Maximum radial working load capacity of guide wheel

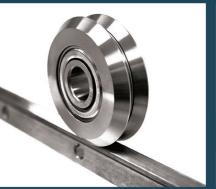

$$\begin{array}{|c|c|c|c|c|c|} \hline \textbf{SIZE} & \hline & \textbf{LIFE CONSTANT } \textbf{L}_{\text{C}} \\ \hline \textbf{INCHES OF TRAVEL LIFE} & \textbf{KILOMETERS OF TRAVEL LIFE} \\ \hline 0 & 1.65 \times 10^6 & 41 \\ 1 & 2.19 \times 10^6 & 55 \\ 2 & 3.47 \times 10^6 & 87 \\ \hline 3 & 5.19 \times 10^6 & 130 \\ \hline \end{array}$$

$$Life = \left(\frac{L_c}{(L_E)^3} \right) A_F$$

WHERE $L_{_{\rm F}}$ = Load factor

L_c = Life constant

A_F = Adjustment factor

Bishop-Wisecarver Corporation is a WBENC certified woman-owned manufacturer of the original **DualVee®** guide wheel and industry leader in linear and curvilinear motion solutions. Exclusive North and Central American partner and distributor for HepcoMotion® products since 1984.

WHAT MAKES US DIFFERENT

Our engineering and manufacturing facility provides expert development support and quick turnaround time. We tackle all engineering challenges with a novel approach — we have the patents to prove it and are majority sourced USA. We offer custom engineering services and technical expertise in motion, sensor and actuator integration, real-time software development, and electromechanical modeling and design.
